BREAKING NEWS

## Deaths among Triple Vaccinated increased by 495% in January with the Vaccinated accounting for 4 in every 5 Covid-19 Cases, Hospitalisations & Deaths since December

BY THE EXPOSÉ ON FEBRUARY 11, 2022 • ( 17 COMMENTS )

Listen Now

Official data from Public Health Scotland confirms the vaccinated population have accounted for 4 in every 5 Covid-19 cases, hospitalisations and deaths over the past two months.

But a <sup>17</sup>side by side comparison of those two months suggests the Covid-19 booster campaign has been a complete failure because the percentage of Covid-19 cases, hospitalisations and deaths have all gone down in the unvaccinated population whilst increasing drastically in the triple vaccinated population.

Nicola Sturgeon the First Minister of Scotland has [insisted that mask wearing and vaccine passports will remain in Scotland](https://inews.co.uk/news/scotland/scotland-covid-rules-nicola-sturgeon-return-to-normal-plan-restrictions-1449267) (<https://inews.co.uk/news/scotland/scotland-covid-rules-nicola-sturgeon-return-to-normal-plan-restrictions-1449267>) despite Boris Johnson the Prime Minister of the United Kingdom scrapping both requirements at the end of January, and pledging to possibly scrap all remaining restrictions towards the end of February.

Mask wearing, as anyone with an ounce of intelligence should know, is of course completely pointless because the virus is small enough to penetrate the holes found in surgical masks and FFP3 masks. So the cloth masks sold by Dr Julia Grace Patterson (*an unregistered doctor who is really a psychiatrist*) and her EveryDoctor venture are just borderline idiotic.

But what's fast becoming even more idiotic is the idea that a vaccine passport system is the way forward, because official Public Health Scotland data shows it is the vaccinated who are most likely to spread Covid-19, it is the vaccinated who are most likely to be hospitalised with Covid-19, and it is the vaccinated who are most likely to die of Covid-19.

## Covid-19 Cases

Public Health Scotland (PHS) publish a [weekly Covid-19 Statistical report](https://publichealthscotland.scot/publications/show-all-releases?id=20580) (<https://publichealthscotland.scot/publications/show-all-releases?id=20580>) containing data on Covid-19 cases, hospitalisations and deaths by vaccination status.

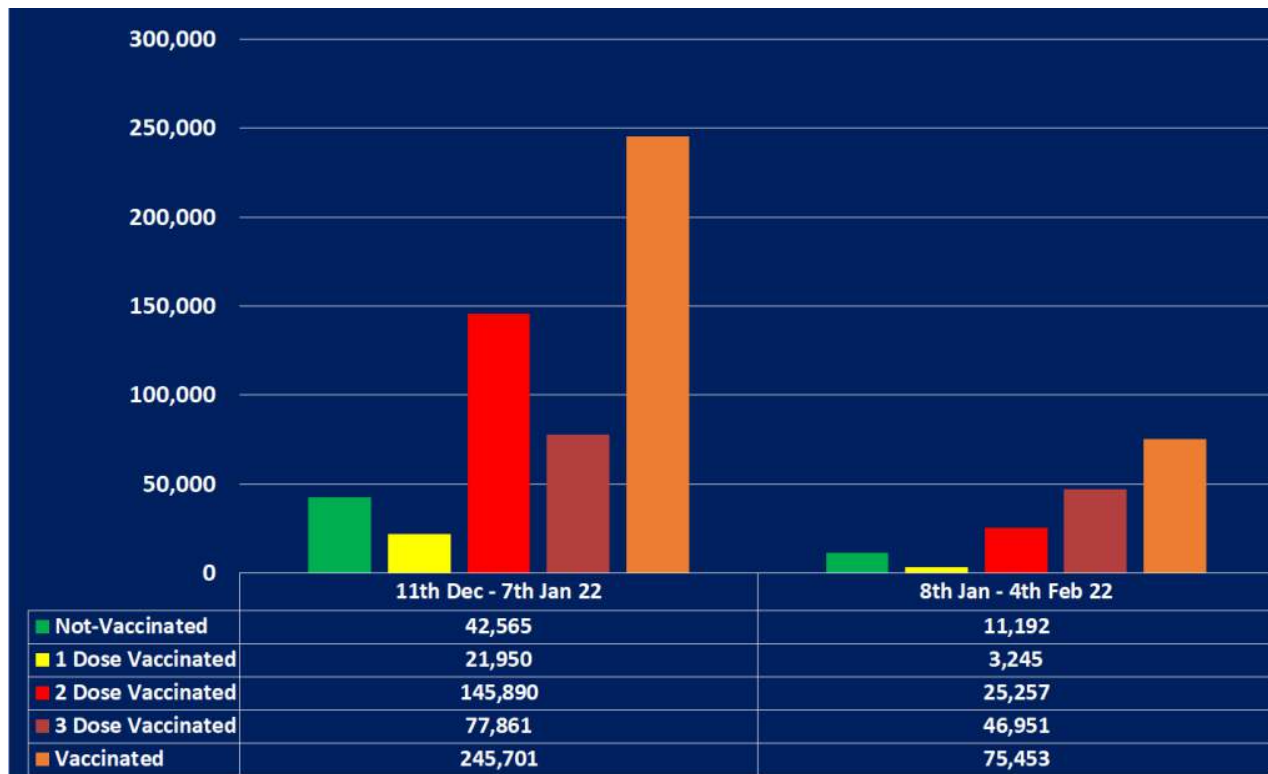

The following chart has been collated from data found in table 11 of the [PHS Covid-19 Statistical Report published 12th Jan 22](https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-12-january-2022/) (<https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-12-january-2022/>), and table 12 of the [PHS Covid-19 Statistical Report published 9th Feb 22](https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-9-february-2022/) (<https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-9-february-2022/>), and it shows the number of Covid-19 cases by vaccination status between 11th Dec 21 and 7th Jan 22, and between 8th Jan and 4th Feb 22.

17

Donate

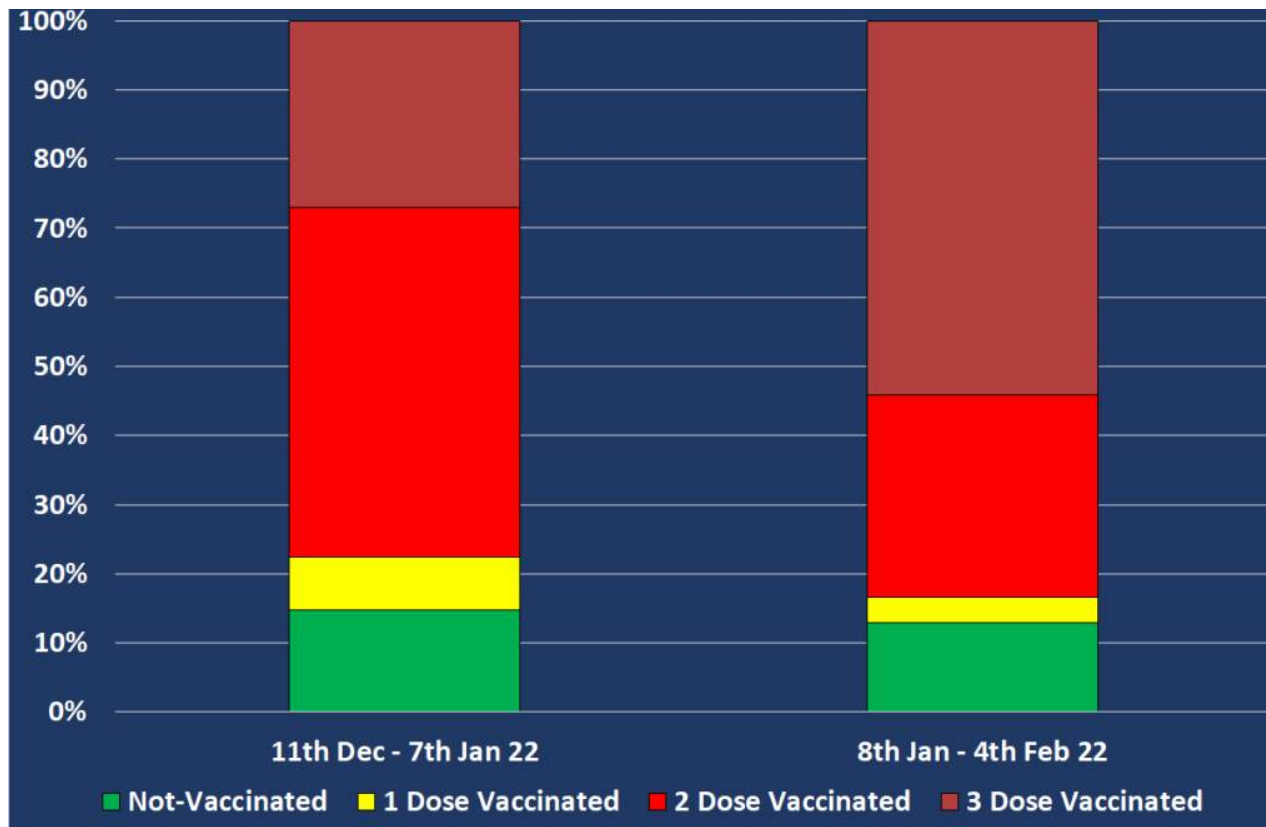

Overall cases have dropped in the last month in all demographics significantly compared to the number of cases recorded between 11th Dec and 7th Jan 22, but in both months the vaccinated have accounted for the vast majority of cases.

The main difference between the two months is that the double vaccinated accounted for the majority of cases between 11th Dec and 8th Jan 22; recording 145,890 cases, but the triple vaccinated accounted for the majority of cases between 8th Jan and 4th Feb 22; recording 46,951 cases.

However, despite cases declining in all demographics over the past two months the data is still quite concerning in regards to the effectiveness of the Covid-19 injections, because as is illustrated in the following chart; the percentage of Covid-19 cases in the unvaccinated has decreased, whilst the percentage of cases among the vaccinated has increased significantly, but mainly in the tripple jabbed.

**ONLY 15 DAYS LEFT TO SAVE THE EXPOSÉ – Less than 0.1% of our readers support us even though we rely solely on your support. Between 11th Dec and 7th Jan 22 the unvaccinated population accounted for 15% of cases, but fast forward one month and we find that between 8th Jan and 4th Feb 22 the unvaccinated only accounted for 13% of cases despite the huge roll-out of the third dose to millions in December.

The vaccinated population accounted for 85% of cases between 11th Dec and 7th Jan 22, with 9% of those cases among the one-dose vaccinated, 32% of those cases among the triple vaccinated, and 59% of those cases among the double vaccinated.

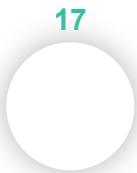

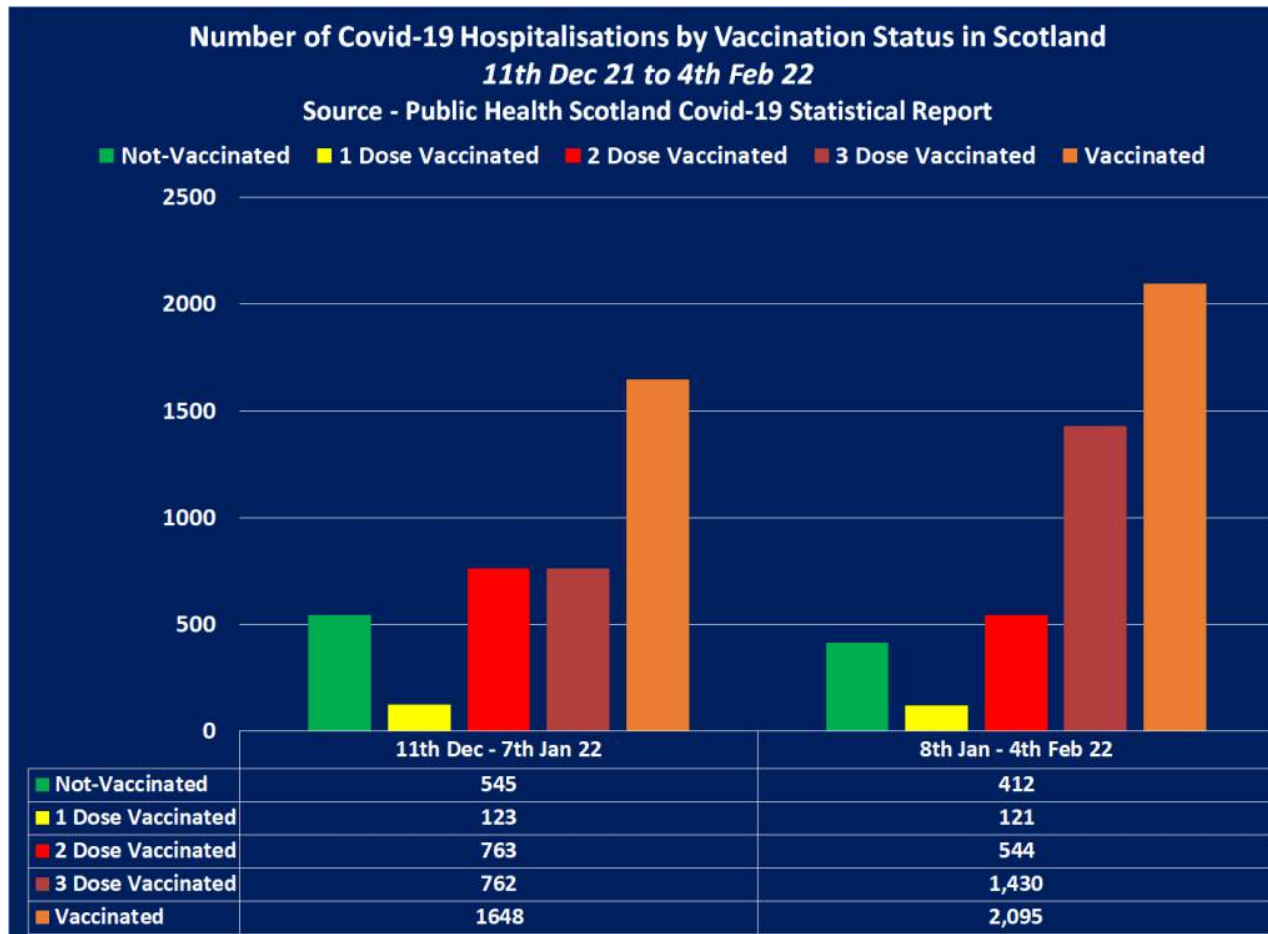

But fast forward one month and we find that the vaccinated accounted for 87% of cases, with the one-dose vaccinated accounting for 4% of those cases, the double vaccinated accounting for 33% of those cases, and the triple vaccinated accounting for 63% of those cases.

This means that despite cases falling among all demographics they actually fell the most among the not vaccinated, single vaccinated, and double vaccinated, with the lowest drop coming in the triple vaccinated. This doesn't make sense if the Covid-19 vaccines are effective. Clearly they are not, at

The following chart has been collated from data found in table 12 of the [PHS Covid-19 Statistical Report published 12th Jan 22](https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-12-january-2022/) (<https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-12-january-2022/>), and table 13 of the [PHS Covid-19 Statistical Report published 9th Feb 22](https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-9-february-2022/) (<https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-9-february-2022/>), and it shows the number of Covid-19 hospitalisations by vaccination status between 11th Dec 21 and 7th Jan 22, and between 8th Jan and 4th Feb 22.

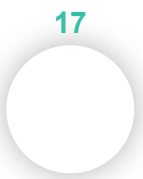

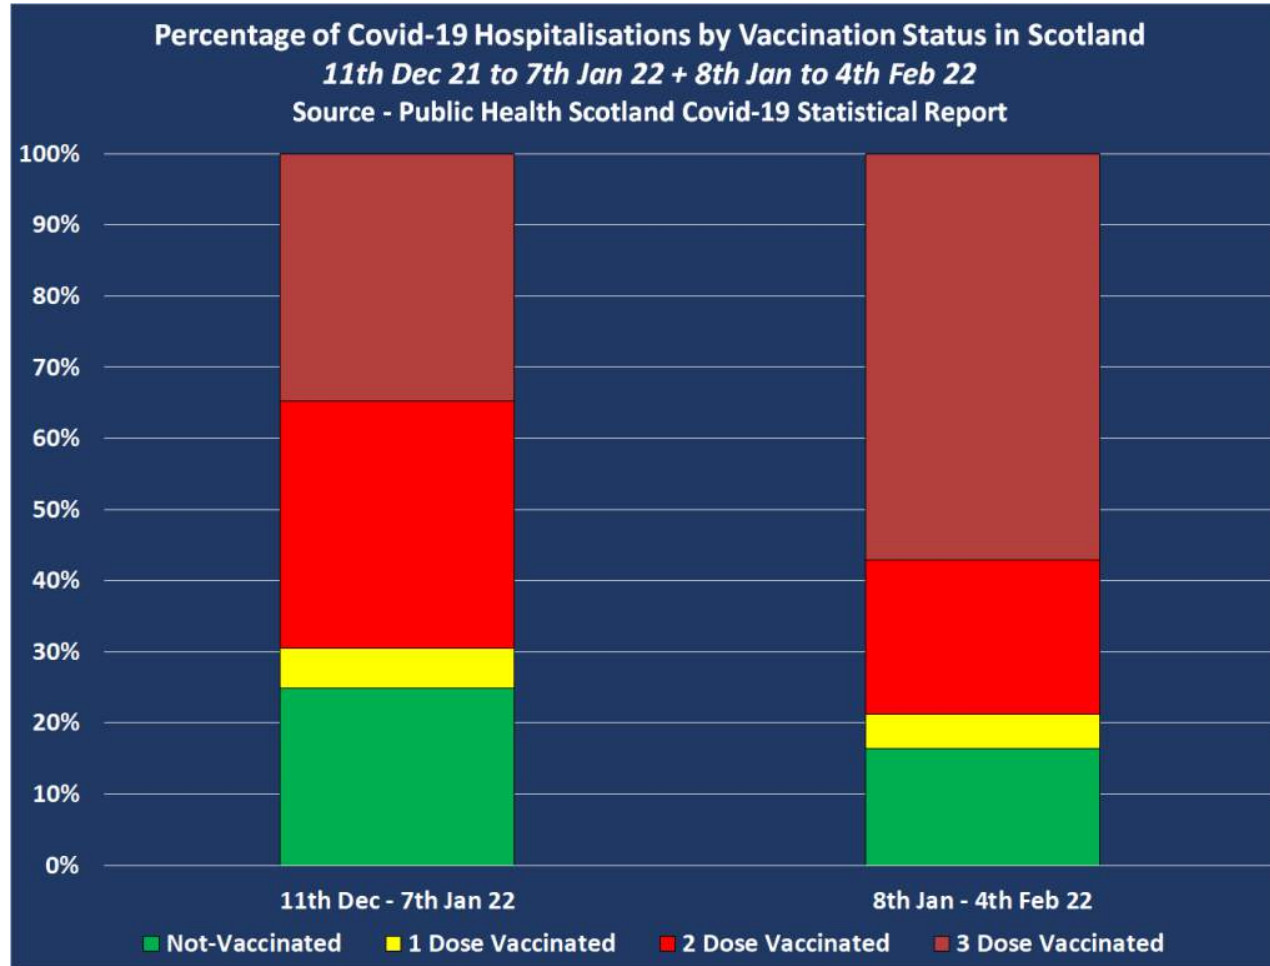

The main difference between the data on hospitalisations and the data on cases is that overall hospitalisations have increased in the most recent month compared to the number of hospitalisations recorded between 11th Dec and 7th Jan 22, but that increase is only down to a huge increase in hospitalisations among the triple vaccinated population because hospitalisations among all other demographics including the unvaccinated decreased.

**ONLY 15 DAYS LEFT TO SAVE THE EXPOSÉ – Less than 0.1% of our readers support us even though we rely solely on your support. But if every single one of you reading this supported us today we could remove this annoying banner as we'd have the funds to keep going for another year...** (<https://dailyexpose.uk/2022/02/01/february-fundraising-campaign/>)

Donate

This again raises questions surrounding the effectiveness of the Covid-19 injections, because as is illustrated in the following chart; the percentage of Covid-19 hospitalisations in the unvaccinated has decreased, whilst the percentage of hospitalisations among the vaccinated has increased significantly, but only because of the triple vaccinated.

Between 11th Dec and 7th Jan 22 the unvaccinated population accounted for 25% of hospitalisations, but fast forward one month and we find that between 8th Jan and 4th Feb 22 the unvaccinated only accounted for 19.5% of hospitalisations despite the huge roll-out of the third dose to millions in

**ONLY 15 DAYS LEFT TO SAVE THE EXPOSÉ – Less than 0.1% of our readers support us even though we rely solely on your support. Donate

But fast forward one month and we find that the vaccinated accounted for 80.5% of hospitalisations, with the one-dose vaccinated accounting for 6% of those hospitalisations, the double vaccinated accounting for 26% of those hospitalisations, and the triple vaccinated accounting for 68% of those hospitalisations.

This doesn't make sense if the Covid-19 vaccines are effective. Clearly they are not, at least when it comes to preventing both infection and hospitalisation.

## Covid-19 Deaths

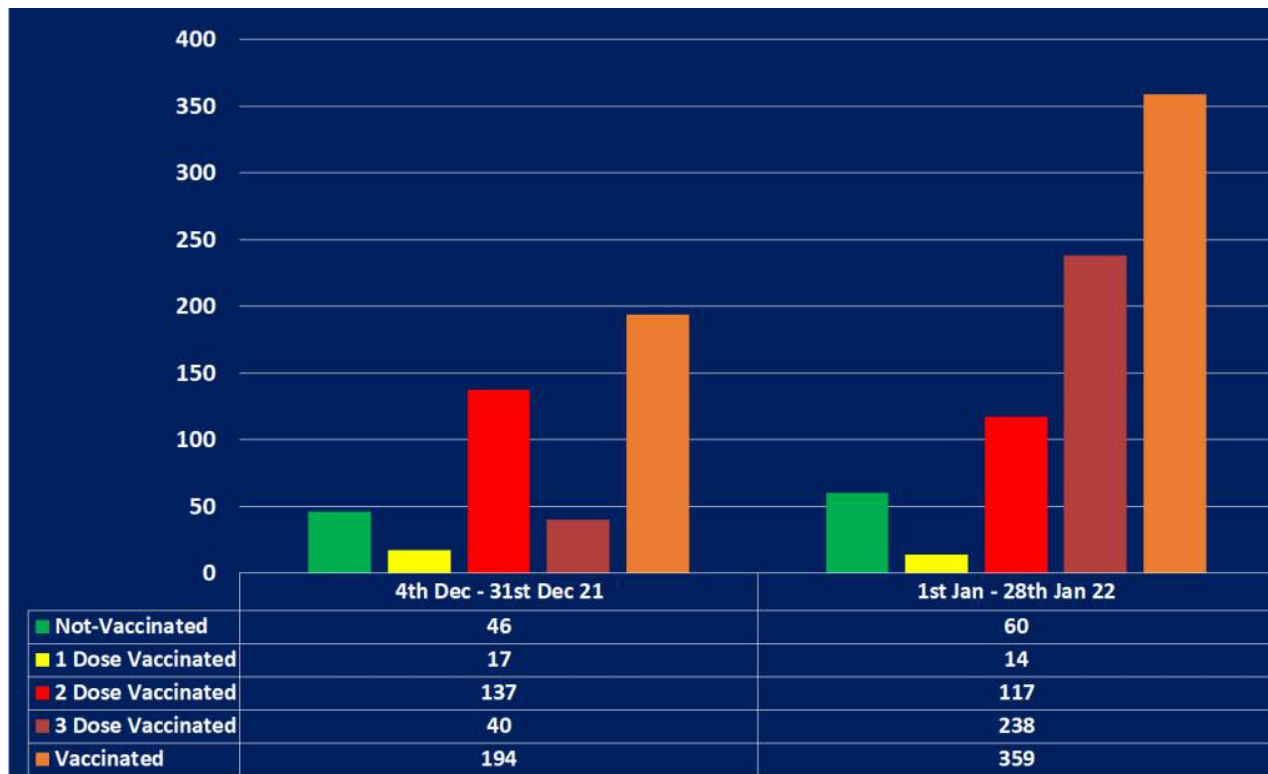

The following chart has been collated from data found in table 13 of the [PHS Covid-19 Statistical Report published 12th Jan 22](https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-12-january-2022/), (<https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-12-january-2022/>) and table 14 of the [PHS Covid-19 Statistical Report published 9th Feb 22](https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-9-february-2022/) (<https://publichealthscotland.scot/publications/covid-19-statistical-report/covid-19-statistical-report-9-february-2022/>), and it shows the number of Covid-19 deaths by vaccination status between 4th Dec and 31st Dec 21, and between 1st Jan and 28th Jan 22.

17

**ONLY 15 DAYS LEFT TO SAVE THE EXPOSÉ – Less than 0.1% of our readers support us even though we rely solely on your support. Unlike cases, but just like hospitalisations, deaths rose overall between 1st Jan and 28th Jan 22 compared to the number recorded in December, and yet again this was solely due to the triple vaccinated population.

Deaths rose from 40 among the triple vaccinated between 4th Dec and 31st Dec 21, to a concerning 238 between 1st Jan and 28th Jan 22. This represents a 495% increase in deaths compared to just a 30% increase in deaths among the unvaccinated population at the same time rising from just 46 to just 60.

This once again raises serious questions regarding the effectiveness of the Covid-19 vaccines, because as is illustrated in the following chart; the percentage of Covid-19 deaths in the unvaccinated has decreased, whilst the percentage of deaths among the vaccinated has increased significantly, but again only because of the triple vaccinated.

Between 4th Dec and 31st Dec 21 the unvaccinated population accounted for 19% of deaths, but fast forward one month and we find that between 1st Jan and 28th Jan 22 the unvaccinated only accounted for 14% of deaths despite the huge roll-out of the third dose to millions in December.

17

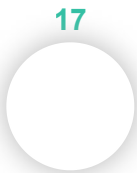

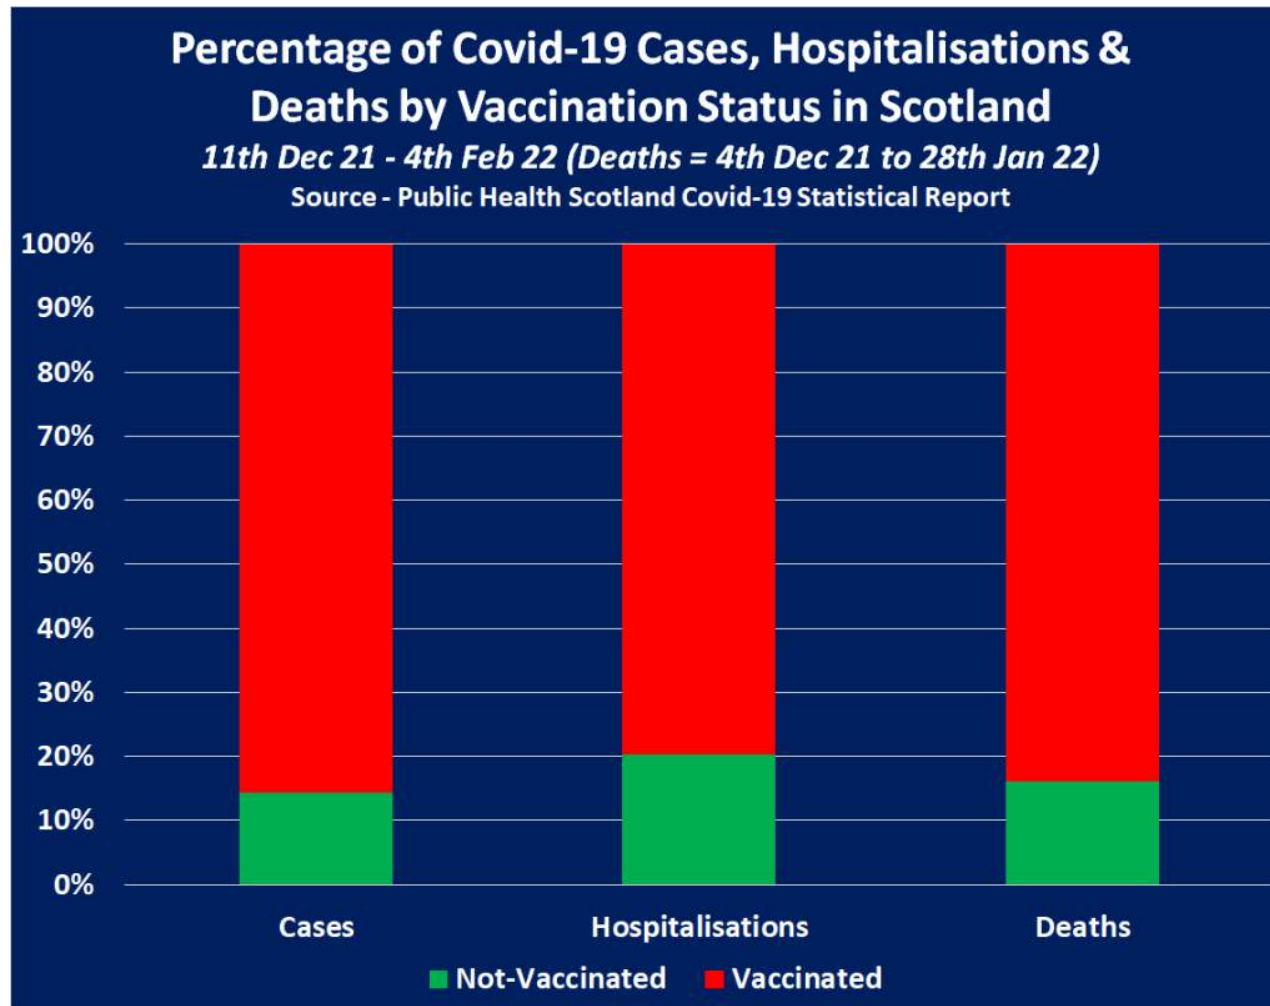

The vaccinated population accounted for 81% of deaths between 4th Dec and 31st Dec 21, with 9% of those deaths among the one-dose vaccinated, 21% of those deaths among the triple vaccinated, and 70% of those deaths among the double vaccinated.

But fast forward one month and we find that the vaccinated accounted for 86% of deaths, with the one-dose vaccinated accounting for 4% of those deaths, the double vaccinated accounting for 32% of those deaths, and the triple vaccinated accounting for 64% of those deaths.

**ONLY 15 DAYS LEFT TO SAVE THE EXPOSÉ – Less than 0.1% of our readers support us even though we rely solely on your support. The following chart shows the percentage of Covid-19 cases, hospitalisations by vaccination status in Scotland between 11th Dec 21 and 4th Feb 22, and the percentage of Covid-19 deaths by vaccination status in Scotland between 4th Dec 21 and 28th Jan 22.

Official Pulic Health Scotland data shows that the vaccinated population accounted for 86% of Covid-19 cases, 80% of Covid-19 hospitalisations, and 84% of Covid-19 deaths. Therefore, Scotland is in the midst of a 'Pandemic of the Fully Vaccinated' and Nicola Sturgeon should scrap the discriminatory

most likely to spread Covid-19, it is the vaccinated who are most likely to be hospitalised with Covid-19, and it is the vaccinated who are most likely to die of Covid-19.

The 'passports' are, and never were, a way to stop anything. They are used to encourage/force people to take the drugs, because that's where the money is.

It makes no difference if you have restrictions or not, just as it makes no difference if you have 'passports' or not, because they'll carry right on promoting jabs and so the 'great' british public will carrying right on being jabbed. It's as inevitable as the war that everyone's ignoring.

If you want a laugh look up how "truss" (your mighty foreign something-or-other) was treated by the russian's when she (or maybe he by the look of 'her') went to tell the biggest country on earth what to do. If I'd been there I'd have asked her/him why russia should allow nuclear missiles within 7 minutes of moscow, why russian troops within russia should be told where to go by yet another fat and ugly british 'minister', and why russia should allow russian citizens to be threatened by 'nato' (everyone's favourite 'peace keeper').

It would be useful if you could show the numbers in rates (incidence pr 100 000 for instance) to correct for the size of the different populations.

Cheers
